

# ULTRATITE 50 OC

NO MIX OPEN CELL SPRAY FOAM SOLUTION

## Foam Performance That Makes the Difference

Every great home starts with performance you can count on. Ultratite Open Cell is a spray-applied insulation that expands to fill every gap, corner, and cavity with ease. With an R-value of 3.7 per inch, it delivers reliable thermal resistance while bonding tightly to the structure of your home. That means fewer weak points, less wasted energy, and more consistent protection throughout the building envelope.

By starting with performance, Ultratite establishes the foundation for everything else a homeowner values: comfort, health, savings, and sustainability. Once the foam is in place, the benefits ripple through the entire home.

## Comfort You Can Feel Every Day

That performance quickly translates into everyday comfort. Because Ultratite Open Cell expands to create a continuous seal, it reduces drafts and eliminates hot or cold spots, keeping temperatures stable from room to room and floor to floor. Families notice the difference right away—spaces that were once too warm in the summer or too chilly in the winter become consistently comfortable year-round.

But comfort isn't only about temperature. Ultratite has a Noise Reduction Coefficient

(NRC) of 0.75, meaning it absorbs up to 75% of sound energy. This transforms the home into a quieter, calmer place, cutting down on outside noise and reducing disturbances between rooms. Bedrooms are more restful, living rooms more peaceful, and family life simply feels more at ease.

With comfort taken care of—**temperature, noise, and air quality**—homeowners naturally begin to wonder: what about the cost of keeping my home running?

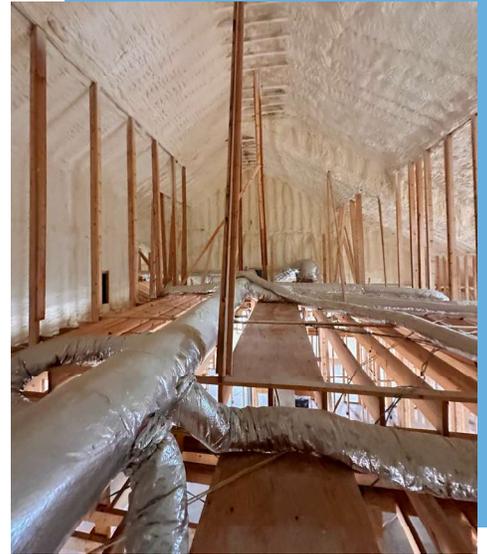

**That's where Ultratite continues to deliver.**

## Energy Savings That Add Up

By helping your home hold conditioned air, Ultratite 50 OC Open Cell takes pressure off your heating and cooling system. Equipment doesn't have to work as hard, which translates to lower monthly utility bills and less wear and tear over time. Those savings add up year after year, making insulation one of the smartest investments a homeowner can make.

And energy savings don't just benefit your wallet. Reduced energy use also means a smaller carbon footprint—a key step toward more sustainable living. Which leads directly to another important question many families ask: is my home safe, healthy, and environmentally responsible?

## Clean Air and Sustainable Living

A well-insulated home is about more than efficiency—it's about the quality of the air you breathe. By reducing pathways for dust, pollen, and allergens, Ultratite Open Cell helps create a cleaner, healthier indoor environment. Families enjoy peace of mind knowing their home is more protected against irritants and moisture that can lead to mold growth.

At the same time, Ultratite is designed as a sustainable, fluid-applied solution. It's water-blown, avoiding harmful CFCs, and recognized as an NAHB Green Approved Product. By reducing jobsite waste and aligning with modern green building standards, it's an insulation choice that supports both family health and environmental responsibility.

When you put it all together—**performance, comfort, savings, clean air**, and **sustainability**—it comes down to one thing every homeowner is looking for...

## Lasting Peace of Mind

With Ultratite Open Cell, your family enjoys steady comfort, lower bills, cleaner air, and the assurance that your home is built with sustainability in mind. It's a solution that improves your quality of life today while protecting your investment for years to come. When you choose Ultratite, you choose smarter living from the inside out.
